

# Cobi Rehab® XXL Stand Tall walking frame

## Multi-functional mobility aid

The Cobi Rehab® XXL Stand Tall walking frame is a multi-functional mobility aid that can be used for walking and sit to stand transfers. The Stand Tall gives greater independence as it allows users to engage in their own transfers. Specifically designed for bariatric users, this mobility aid has a user weight of 325kg. 32mm tubing ensures the frame is durable and long lasting as well as easy to clean. The frame has been cleverly designed to provide exceptional support and to minimise the risk of injury to both the carer and the user. Two built-in hand grips at different heights, allow the user to rise to a standing position in small stages. The brakes are easy to access and can be locked for greater control and stability. The frame height is adjustable and the width and angle of the forearm padding can also be adapted to suit each individual.

### Features

- Easily adjustable frame height
- The width and angle of the forearm padding is adjustable
- Lockable brakes
- Powder-lacquered chromium molybdenum steel
- Two PU foam hand grips on each side with multiple grip combinations
- Forearm padding
- Durable, easily cleaned frame constructed from 32mm diameter tubing
