

# Cobi Rehab® XXL Minimaxx wheelchair

## Supportive bariatric wheelchair

The Cobi Rehab® XXL Minimaxx is a foldable wheelchair that is comparatively lightweight yet has a high weight capacity to accommodate bariatric users. It uses very light tubing technology, similar to high end road bikes and mountain bikes, to achieve a safe working load of 325kg.

Height adjustable push handles make it easy for carers to move, and the balance point can be adjusted for greater stability. Removable arm and foot rests help make transfers into the wheelchair easier. An intuitive folding system and quick release rear wheels make this chair easy to transport and store.

Available in three seat widths: 610mm, 660mm and 710mm.

Designed and  
manufactured in  
Denmark

## Features

- Frame made of powder-lacquered chromium molybdenum steel for strength and durability
- This wheelchair only weighs approx. 9% of its weight capacity
- Folds for transport and storage with easily activated folding system and quick release rear wheels
- The low seat height makes it easy to access the chair and still propel it
- The long armrests make it easy for the user to get in and out of the chair
- PU padded armrests are swing away and removable for easy access and side transfers
- Adjustable balance point
- Height adjustable push handles are angled to relieve strain on the wrists and shoulders of the attendant
- The foot supports can be swung away, removed, or width adjusted. They can even be swapped sides to provide support up to 1100mm apart
- Footrests can take up to 100kg each
- 2x 600mm rear wheels are solid PU tires, 2x 125mm front castors nylon with PU
- Anti-tipper bars
- Comes with viscoelastic and spring base comfort cushion for pressure relief

# Cobi Rehab® XXL Minimaxx wheelchair

The user-friendly bariatric wheelchair solution

The Cobi Rehab® XXL Minimaxx is a lightweight wheelchair designed for bariatric users. It can withstand a safe working load of 325kg, while the chair itself weighs less than 10% of that weight capacity. The light and robust tubing technology which the Minimaxx is constructed of is similar to that used on high-end road bikes and mountain bikes.

The Minimaxx is simple for both a carer and individual to use. Rear wheels carry most of a user's weight, making it easy to push, while height adjustable push handles enable a carer to use their own body weight to turn and push the chair, minimising strain to the wrists and shoulders. For ultimate stability, the balance point of the chair can be adjusted and the castor wheels are further forward than on standard chairs. Removable arm and footrests swing away to support transfers. Height adjustable footrests can support up to 100kg each, and their width can be adjusted up to 1100mm apart.

With its easily activated folding system and quick-release rear wheels, the Minimaxx folds quickly for transport and storage. The Minimaxx wheelchair comes with a viscoelastic and spring base comfort cushion for pressure relief. It's available in a range of seat widths: 610mm, 660mm and 710mm.
